VS300 Table Top Lidding Machine

The VS300 tray sealer is supplied with a die plate custom made for the tray to be sealed, with additional die plates available upon request. The trays are sealed with either a peelable film or a sealable (welded) film. The machine will work with all types of sealable food trays and films up to a maximum width of 190mm with a maximum tray length of 250mm.

The VS300 sealing machines are typically found in supermarkets, local butchers and grocery shops producing ready meals, fresh and cooked meats, fish and vegetables.

The machine is switched on and the required temperature set, when the temperature has been reached, the film which is mounted at the back of the machine on two support rollers is pulled over the top of the tray to be sealed which had been placed in the die plate. The sealing head is then lowered by hand and pressed down to seal the film to the tray, at the same time the film is cut from the main roll. The sealing head is then raised to the open position and the tray removed.

Features

- Adjustable or Fixed temperature control as standard
- Digital adjustable control available as an optional extra
- Teflon coated sealing plate
- Stainless steel fabrication
- Quick change die plates (no tools required)
- Twin reel film supports

Technical Specification

- Maximum film width: 190mm
- Sealing area: 250 × 190mm
- Electrics: 240vac/3amp
- Machine dimensions: 605 × 255mm
- Weight: 10kgs
